

#### **PROFILE**

As a versatile computer science engineering student at the National School of Computer Science (ENSI), I have gained proficiency in various areas including artificial intelligence, web development, and mobile development. With a strong skill set in these domains, I am actively seeking a rewarding internship opportunity that will enable me to further enhance my capabilities and propel my career forward.

MARCH 2022 - MAY 2022

#### Developping a clothing recommendation system :

It consists of building a chatbot within a mobile application for the purpose of recommending clothing items that perfectly fit the user's preferences using Rasa, Spacy, Yolo, U-net, and Roboflow for annotation.

#### Developping a mobile application for educational purposes:

This mobile application dedicated to children was developed using React Native, under the supervision of our ENSI Junior Enterprise project manager and adopting an Agile Scrum methodology.

#### **Developping Web Application:**

It consists of implementing an effective and responsive web application that collects data illustrating the status of dams in Tunisia and offers a daily updated visualization of the collected data. The Trello platform was used as a collaboration tool to organize the project.

#### Developping an e-commerce platform:

This dynamic e-commerce platform combines both a mobile and web application. Specifically, I worked with my colleagues on the web frontend and backend using React JS, Express JS, and MongoDB.

#### Developping a super Mario game :

This project entails designing and developping a new version of the Super Mario game, where all functionalities and graphics interface were implemented using the SFML library and C++ programming language.

## **EDUCATION**
